Practical 10

Practical - 10

A network communication model is created by establishing connection between a client and a server. The connection is also guaranteed by transferring client's IP address to the server and displays it in the server's premises. Write a suitable program for this scenario (Python).

Contd…

Aim:

To develop a client–server network communication program that establishes a connection between a client and a server and transfers the client's IP address to the server for display.

Objective:

To establish a reliable connection between the client and server using socket programming.
